A new requirement was added to the Test Standards for Vented Gas Fireplaces (ANSI Z21.50 and CSA 2.22) and Vented Gas Fireplace Heaters (ANSI Z21.88 and CSA 2.32). This change will affect every vented gas fireplace manufacturer and their customers (see announcement sent out August 30th, 2013 for more information).

This revised test standard states that all vented gas fireplaces manufactured in Canada and the United States after January 1<sup>st</sup>, 2015 **MUST** include a barrier to prevent children and other at risk persons from coming into direct contact with the hot glass fronts of these fireplaces. Any vented gas fireplaces manufactured before that date can still be sold after January 1<sup>st</sup>, 2015 without providing a barrier. This includes existing inventory in warehouses.

For more information regarding the new vented gas fireplace barrier requirements, visit the Hearth Patio and Barbecue Association's website at [www.hpba.org](http://www.hpba.org).

Certified under Canadian and American National standards.

Figures may vary with individual conditions such as floor plan layout, insulation value/heat loss of the house and geographical location.

Consult your owner's manual for complete installation instructions, accurate framing dimensions and proper clearances to combustible materials. Installations shown may not be accurate to code. Check all local and national building codes and gas regulations. Products may not be exactly as shown. All specifications are subject to change without prior notice due to on-going product improvements. BTU's listed in brochure reflect natural gas applications.
